$$(b) \quad y' = \frac{x^2 - 4 - 2x(x-a)}{(x^2-4)^2} = \frac{-x^2 - 4 + 2xa}{(x^2-4)^2}$$

$-2 \leq a \leq 2$ $4a^2 - 16 < 0$ $\Delta < 0$ (יש, אבל לא תמיד) $\Delta > 0$ (יש) $\Delta = 0$ (יש)
 \rightarrow יש להימנע מ- $x=2$? \rightarrow אבל לא תמיד $a=2$ אז

- (7) (1) $x \neq \pm 2$
 (2) $(1, 0)$ $(0, \frac{1}{4})$
 (3) $\lim_{x \rightarrow 2^+} \frac{1}{x-2} = \infty$
 $\lim_{x \rightarrow 2^-} \frac{1}{x-2} = -\infty$

$x=2$

$$\left. \begin{aligned} \lim_{x \rightarrow -2^+} \frac{-3}{+0} &= -\infty \\ \lim_{x \rightarrow -2^-} \frac{-3}{-0} &= \infty \end{aligned} \right\} \boxed{x=-2}$$

$$\left. \begin{aligned} m &= \lim_{x \rightarrow \infty} \frac{x-1}{x(x^2-4)} = 0 \\ n &= \lim_{x \rightarrow \infty} \frac{x-1}{x^2-4} = 0 \end{aligned} \right\} \boxed{y=0}$$
