

$\frac{AC}{\sin(180-x-\frac{90-2x}{2})} = \frac{AO}{\sin(\frac{90-2x}{2})}$
 $AO = \frac{\sin(45-\frac{x}{2}) \cdot b}{\sin(\frac{x}{2})}$

$\frac{DO}{AO} = \sin x$
 $DO = \frac{\sin x \cdot \sin(45-\frac{x}{2}) \cdot b}{\sin(\frac{x}{2})}$

$\frac{4x}{\sin 80} = \frac{3x}{\sin x B_1}$
 $\frac{4}{\sin 80} = \frac{3}{\sin x B_1} \Rightarrow x B_1 = 47.61$

$x A = 180 - 47.61 - 80 = 52.39$

$\frac{AB}{\sin 80} = \frac{BD}{\sin 52.39}$
 $\frac{AB}{BD} = \frac{\sin 80}{\sin 52.39} = 1.24$

$\frac{x}{\sin x C} = \frac{AD}{\sin x C}$

$\sin x C = \frac{AD \sin x C}{x}$

$\frac{x}{\sin \beta} = \frac{AD}{\sin x B}$

$\sin x B = \frac{AD \sin \beta}{x}$

$\frac{AD}{\sin x C} = \frac{AC}{\sin x B}$

$\frac{AD}{AC} = \frac{\sin x C}{\sin x B} = \frac{\frac{AD \sin x C}{x}}{\frac{AD \sin \beta}{x}} = \frac{\sin x C}{\sin \beta}$

$\frac{12}{\sin 70} = \frac{10}{\sin x A_1}$

$x A_1 = 51.54$

$x A C D = 180 - 70 - 51.54 = 58.46$

$\frac{AD}{\sin 58.46} = \frac{12}{\sin 70} \Rightarrow AD = 10.88$

$(180 - \delta \text{ קודם כל } x A = 110^\circ \Rightarrow x A_2 = 58.46 \Rightarrow x B = 180 - 58.46 - 58.46 = 63.08$

<http://heshbonia.com/> כל הזכויות שמורות ל

$\frac{12}{\sin 63.08} = \frac{CB}{\sin 58.46} \Rightarrow CB = 11.5$

$\frac{12}{\sin 63.09} = \frac{AB}{\sin 58.46} \Rightarrow AB = 11.5$

סכום היתר = $11.5 + 11.5 + 10 + 10.88 = 43.88$
